“Oracle’s solution has met our expectations. It helps us control costs and increase efficiencies by delivering real-time data where and when it is needed.”

– Kent Immenschuh, Vice President, Information Services, JE Dunn Construction

JE Dunn Construction Boosts Collaboration Among Employees, Customers, and Partners

JE Dunn Construction is ranked among the top 10 general building contractors by *ENR* magazine. With a focus on quality work and on-time completion, as well as dedication to hiring skilled employees, the company receives more than 80% of its business from repeat customers and referrals. Today, members representing four generations of the Dunn family are active in the family-owned business.

Challenges

- Grow business and improve interaction with clients and partners by developing a vehicle to enable online document collaboration and real-time access to project information
- Improve internal project management performance and collaboration between departments and divisions
- Streamline compliance and administrative processes
- Control costs and improve business infrastructure as a platform for future service-oriented offerings

Solution

- Leveraged Oracle Collaboration Suite, Oracle Portal, Oracle Internet Directory, Oracle Business Intelligence, and Oracle Database to create ONE DUNN, a secure standards-based, Web-based portal for employees, customers, and partners
- Integrated ONE DUNN with business applications—including legacy project management and financial systems—to preserve previous technology investments and provide access to business information in one place, with one log-in
- Synchronized Oracle Internet Directory with Novell’s eDirectory to allow for dynamic group participation within Oracle Collaboration Suite and Oracle Portal
- Improved project performance by enabling office, field, and remote employees to access key information at any time
- Reduced administrative workload and strengthened customer service through improved data accuracy and availability
- Worked with Enterprise Business Solutions, LLC (The EBS Group) to leverage open architecture and Web services to incorporate many legacy and Web applications quickly and cost effectively
